**Section 1: Design Guidance for Scaffolds** 5  
Scaffold checklist 5  
1.1 TG20: 13 Standard Scaffolds 8  
1.2 TG20: 13 Special Scaffolds 9  
1.3 System Scaffolds 10  
1.4 Scaffold Design Process 12  
**Section 2: Codes and Legislation** 16  
2.1 Codes of Practice 18  
2.2 NASC Scaffolding Guides 21  
2.3 Other Standards 23  
2.4 Legislation 24  
**Section 3: Design Methods** 27  
3.1 Permissible Stress Design 29  
3.1.1 Load Combinations 29  
3.2 Limit State Design 30  
3.2.1 Load Combinations 30  
3.2.2 TG20 Design Method for Scaffolding 31  
**Section 4: Design Terms** 32  
4.1 Bending Moment 32  
4.2 Axial Load 32  
4.3 Shear 32  
4.4 Deflection 32  
**Section 5: Properties of Scaffolding Components** 33  
5.1 Structural Properties of Couplers 33  
5.1.1 Other couplers and fittings 34  
5.2 Properties of Common Scaffolding Components 35  
**Section 6: Loading** 37  
6.1 Mass of Materials 39  
6.2 Imposed loads 42  
6.2.1 TG20:13 Load Classes 42  
6.2.2 BS EN 12811-1 Load Classes 43  
6.2.3 Dynamic Loading 43  
6.2.4 Buffeting Loads 44  
6.2.5 Loads from Falling Objects 47  
6.3 Environmental Loads 48
Section 7: Wind
  7.1 BS EN 1991-1-4:2005 Wind Calculations
  7.2 Scaffold Sheetings
  7.3 Advertisement Banners and Hoardings

Section 8: Snow
  8.1 BS EN 1991-1-3:2003 Snow Calculations

Section 9: Water
  9.1 Forces Produced by Flowing Water

Section 10: Site Survey
  10.1 Information required

Section 11: Design Drawings & Draughting Protocols
  11.1 Draughting Protocols
  11.2 Design information

Section 12: Design Calculations & Considerations
  12.1 Scaffolding Components
  12.2 Prefabricated Beams
  12.3 Standards and Effective Lengths
    12.3.1 Node point restraint
    13.2.2 The Effective Lengths of Scaffold Tube Members – Fully Braced Scaffold
    12.3.3 The Effective Lengths of Scaffold Tube Members – Typical Independent Scaffolds
  12.4 Ground Bearing Pressure
    12.4.1 Load vs. Pressure
    12.4.2 Sole Pads & Sole Boards
    12.4.3 Safe Bearing Performance of the Ground
  12.5 Rigidity and Bracing
    12.5.1 Rigidity
    12.5.2 Bracing
  12.6 Stability
    12.6.1 Factors of Safety
  12.7 Ties and Anchorage
    12.7.1 TG20 Requirements
    12.7.2 Responsibilities
    12.7.3 Tie Capacity
    12.7.4 Ties or Anchors to the Building Structure
    12.7.5 Movable Ties
    12.7.6 Tie Systems
    12.7.7 Tie Tubes to Standards and Ledgers
    12.7.8 Frequency of Tie Points
    12.7.9 The Loading of Ties
    12.7.10 Specific Requirements for Ringbolts
    12.7.11 TG4 Anchorage Systems for Scaffolding
    12.7.12 Overview of Loading on Ties and the Tie Mechanism
    12.7.13 Combined Tensile and Shear Loads

© 48.3 Training Ltd 2016
2-Day Scaffold Design Appreciation – Created 8th January 2016. Updated 3rd March 2016

50 52 56 56 58 59 61 61 62 64 64 64 65 67 67 70 70 71 72 74 74 75 75 78 80 81 82 83 83 84 84 84 84 84 85 85 85 86 87 88 89 89 90 91
12.7.14 Testing
12.8 Tie Patterns for System Scaffolds
  12.8.1 Cuplok® [Developed by SGB]
  12.8.2 Layher Allround
  12.8.3 ‘Genuine’ RMD Kwikstage
  12.8.4 HAKI Universal
  12.8.5 Mixing of System Scaffold Components
12.9 Scaffold Tying Check List
12.10 Examples of Ties and Anchors
  12.10.1 Ringbolts
  12.10.2 Band and Plate Anchors
  12.10.3 Shear Tie Plate
  12.10.4 Typical Adaptor Brackets for Ring Bolts
  12.10.5 Self-tapping Screw Bolts

Section 13: Loading Bays
  13.1 TG20: 13 Loading Bays
  13.2 System Loading Bays

Section 14: Working Platforms and Edge Protection
  14.1 Gaps in Decking
  14.2 Edge Protection

Section 15: Protection Fans
